### Samsung Galaxy 4 LTE smartwatch with HealthAssist®

Received on August 2, 2022

#### William DePond, MD

Dr. William DePond, MD is a hematology specialist in West Palm Beach, FL. He currently practices at United Clinical Laboratory LLC. Dr. DePond is board certified in Anatomic & Clinical Pathology.

#### As a Physician:

Remote monitoring is fantastic. I am able to interface with the patient data in near real-time as well as historically to identify trends or shifts that would need intercession. The data points collected can be tailored to each patient (from a few to many) and can be collected anytime day or night while the patient is wearing the device. Moreover, I could schedule when I wanted the reading for a particular monitor. Thus, I could evaluate the patient at different times, in different settings and without inconvenience to the patient. I received notifications on my phone when a value was outside of my pre-set expected ranges so I could take action in a timely manner

The user interface on the computer and phone are both easy to use (once I got adapted). Any new takes requires a little bit of time for adaptation. Once there, though, the amount of data is great and the ability to view in different time scales is nice also.

#### As a Caregiver:

As a caregiver to my family member, this device offers me peace of mind. I know that if something were to happen, I would be notified by the monitoring service or my family member directly by a simple touch of the button on the watch face. The watch can dial my phone or 911 in an emergency. There is no phone needed to accompany the watch, so if she wanted to just call and talk and could not get to her phone, she could do that also.
